

Protect against flares of recurrent pericarditis

Your choice matters:

ARCALYST is the first and only FDA-approved treatment for recurrent pericarditis¹

2025 ACC Concise Clinical Guidance on the Diagnosis and Management of Pericarditis

affirms the key role of interleukin (IL)-1 pathway
inhibition in the treatment of recurrent pericarditis²

ACC, American College of Cardiology

INDICATION

ARCALYST is indicated for the treatment of recurrent pericarditis (RP) and reduction in risk of recurrence in adults and pediatric patients 12 years and older.

IMPORTANT SAFETY INFORMATION

Warnings and Precautions

- Interleukin-1 (IL-1) blockade may interfere with the immune response to infections. Treatment with another medication that works through inhibition of IL-1 or inhibition of tumor necrosis factor (TNF) is not recommended as this may increase the risk of serious infection. Serious, life-threatening infections have been reported in patients taking ARCALYST. Do not initiate treatment with ARCALYST in patients with an active or chronic infection.

Please see Important Safety Information throughout and full Prescribing Information.

Earlier diagnosis and appropriate intervention can make a difference³

There are an estimated 160,000 individuals with pericarditis in the United States⁴

~1 in 3

individuals with an initial episode of pericarditis may experience a recurrence within 18 months^{3,*}

~40K

individuals seek care for recurrent pericarditis annually^{3,*}

With multiple events, the risk of recurrence increases, while the time to recurrence decreases³

Patients with recurrent pericarditis have heightened risk of serious complications vs the overall pericarditis population^{3,*}

Pericardial effusion:

~3x greater
(49% vs 18.1%)

Cardiac tamponade:

~2x greater
(8.9% vs 5.1%)

Constrictive pericarditis:

~2x greater
(3.9% vs 1.7%)

*Klein et al. JAMA 2021. Data from the PharMetrics Plus database, collected between January 1, 2013 and March 31, 2018, were used for this retrospective analysis (N=7502 patients with pericarditis, 2096 of whom experienced ≥2 recurrences). These data may be underestimations since nearly 10 years have passed since their collection.

Without appropriate intervention, patients with recurrent pericarditis may suffer from the disease for years⁵⁻⁷

Recurrent pericarditis is a chronic, IL-1-driven autoinflammatory disease often lasting 3 years or more in many patients with multiple* recurrences^{5,6}

*Defined as ≥ 2 or more recurrences.

Observational study of 375 patients with multiple* recurrences of recurrent pericarditis⁵

- ◆ Approximately one-third of patients were still suffering at **5 years**[†]
- ◆ Approximately one-quarter of patients were suffering at **8 years**[†]

IL, Interleukin.

Data from Optum Health Care Solutions, Inc., collected from January 1, 2007 through March 31, 2017 were analyzed.

*Defined as ≥ 2 or more recurrences.

[†]Median duration of disease in patients with recurrent pericarditis who experienced multiple recurrences.

Are any of these four patients **similar to those in your practice?**

Below are real patients who were diagnosed with recurrent pericarditis—for each patient, read more for a snapshot of their journey and previous treatments.

Unrecognized burden

"It feels like sharp stabbing pain that radiates to your back."

Vanessa, 40

CLINICAL HIGHLIGHTS

Symptoms: Starting at disease onset, she experienced fatigue, chest pain, difficulty breathing, and frequent illnesses

Impact: Absences at work and school combined with feelings of social isolation

Initial treatment: Delayed receiving treatment for 2 years due to misdiagnoses. Initially treated with steroids and colchicine; subsequent transition to anakinra, however, had limited response and an allergic reaction

Discontinued steroids

"We tried tapering off prednisone. My inflammation markers rose and I experienced another flare."

Zenda, 54

CLINICAL HIGHLIGHTS

Symptoms: From disease onset, she experienced chest pain, shortness of breath, and fatigue

Impact: Difficulty accomplishing work and chores

Initial treatment: Initially treated with colchicine; experienced a second recurrence and subsequently treated with steroids, however, experienced side effects while on treatment

In a Harris Poll survey of 125 patients with recurrent pericarditis⁸:

85% said they **often feel like they "fall through the cracks"***

88% want their doctor to ask more **questions** about symptoms and/or flares*

*This survey was conducted online within the United States by The Harris Poll on behalf of Kiniksa Pharmaceuticals from May 4–June 1, 2023. Among 125 US adults ages 18+ who were diagnosed with recurrent pericarditis and were not currently pregnant or breastfeeding and had never used/were not currently using an IL-1 antagonist. The sampling precision of Harris online polls was measured using a Bayesian credible interval. For this study, the sample data were accurate to within +/- 8.7 percentage points using a 95% confidence level.⁸

IMPORTANT SAFETY INFORMATION (continued)

Warnings and Precautions (continued)

- Discontinue ARCALYST if a patient develops a serious infection.

Please see Important Safety Information throughout and [full Prescribing Information](#).

Arcalyst[®]
(rilonacept) For Injection

While each patient with recurrent pericarditis may present differently, **the burden of disease remains meaningful.**⁸

Cycled NSAIDs/colchicine

"When I've had flares, they affected everything. I've had to resign from my job—it was my identity."

Cathy, 56

CLINICAL HIGHLIGHTS

Symptoms: First symptoms included fatigue, chest pain, and dizziness

Impact: Once very active with exercise, but her flares made her more sedentary

Initial treatment: Initial treatments included repeated cycles of NSAIDs and colchicine; she experienced 12 flares in 5 years

Consistency was critical

"I thought this was behind me after the last treatment."

Gary, 50

CLINICAL HIGHLIGHTS

Symptoms: Initial symptoms included chest pain and difficulty breathing

Impact: Forced to take an extended absence from work due to difficulty walking

Initial treatment: Discontinued prematurely after 3 months while not experiencing symptoms, but had a recurrence within 30 days

In a Harris Poll survey of 125 patients with recurrent pericarditis⁸:

70% missed out on important events or functions due to recurrent pericarditis

86% were worried they could have a flare at any time

IMPORTANT SAFETY INFORMATION (continued)
Warnings and Precautions (continued)

- It is possible that taking drugs such as ARCALYST that block IL-1 may increase the risk of tuberculosis (TB) or other atypical or opportunistic infections.

Please see Important Safety Information throughout and full Prescribing Information.

Arcalyst[®]
(rilonacept) For Injection

Patients may suffer for years before an accurate diagnosis^{5,8}

In a Harris Poll survey of 125 patients with recurrent pericarditis⁸:

96% were misdiagnosed with other conditions before receiving an accurate diagnosis*

~3 episodes on average prior to recurrent pericarditis diagnosis*

2025 ACC CCG: Criteria for Diagnosis of Recurrent Pericarditis

According to the 2025 ACC CCG, a diagnosis of recurrent pericarditis follows the same criteria as first-episode pericarditis, plus a symptom-free interval of ≥ 4 to 6 weeks

Must be present:
Pleuritic chest pain
(or equivalent suggestive presentation)[†]

and

1 more finding (possible diagnosis)
2 or more findings (definite diagnosis)

Findings may include:

- ✓ Inflammatory biomarkers (e.g., CRP)
- ✓ Electrocardiogram changes
- ✓ Pericardial friction rub
- ✓ Cardiac imaging evidence of new or worsening pericardial effusion (e.g., echocardiogram)
- ✓ Cardiac imaging evidence of pericardial inflammation (e.g., magnetic resonance imaging)

ACC, American College of Cardiology; CRP, C-reactive protein.

*This survey was conducted online within the United States by The Harris Poll on behalf of Kiniksa Pharmaceuticals from May 4–June 1, 2023.

Among 125 US adults ages 18+ who were diagnosed with recurrent pericarditis and were not currently pregnant or breastfeeding and had never used/were not currently using an IL-1 antagonist. The sampling precision of Harris online polls was measured using a Bayesian credible interval. For this study, the sample data were accurate to within ± 8.7 percentage points using a 95% confidence level.⁸

[†]If there are no other findings, recurrent pericarditis is unlikely but cannot be ruled out.²

IMPORTANT SAFETY INFORMATION (continued)

Warnings and Precautions (continued)

- Although the impact of ARCALYST on infections and the development of malignancies is not known, treatment with immunosuppressants, including ARCALYST, may result in an increase in the risk of malignancies.

Please see Important Safety Information throughout and full Prescribing Information.

Arcalyst[®]
(rilonacept) For Injection

ACC CCG affirms the role of ARCALYST: The next step in care after NSAIDs + colchicine and instead of corticosteroids.²

IL-1 pathway inhibition is an ACC-recommended next therapy after initial treatment for recurrent pericarditis

Adapted from Wang TKM, et al. *J Am Coll Cardiol*. 2025.

- ◆ **"No response"** refers to individuals who experience recurrences or intolerance to NSAIDs or aspirin + colchicine²

NSAIDs, Nonsteroidal Anti-inflammatory Drugs.

*Autoinflammatory phenotype is defined as patients having fever and/or elevation of C-reactive protein and/or cardiac magnetic resonance imaging evidence of pericardial inflammation.

IMPORTANT SAFETY INFORMATION (continued)

Warnings and Precautions (continued)

- Hypersensitivity reactions associated with ARCALYST occurred in clinical trials. Discontinue ARCALYST and initiate appropriate therapy if a hypersensitivity reaction occurs.

Please see Important Safety Information throughout and [full Prescribing Information](#).

Arcalyst[®]
(rilonacept) For Injection

In RHAPSODY, ARCALYST delivered rapid treatment response— as early as after the first dose^{1,9}

RHAPSODY run-in period: ARCALYST delivered rapid treatment response in patients with recurrent pericarditis¹

Median time to treatment response*:
5 days (95% CI: 4.0, 7.0)

Median time to pain response:
5 days (95% CI: 4.0, 6.0)

Median time to CRP normalization:
7 days (95% CI: 5.0, 8.0)

*Time to treatment response was defined as the time from the first dose to the first day when pericardial pain was NRS ≤2 (0-10) and CRP ≤0.5 mg/dL (measured within 7 days before or after the pain response).⁹

In RHAPSODY, ARCALYST was steroid sparing⁹:

- ◆ 48% (41 of 86) of patients were receiving corticosteroids at baseline
- ◆ 100% of the 41 patients receiving corticosteroids (CS) at baseline were able to transition off CS soon after initiating therapy[†]
- ◆ Median time to ARCALYST monotherapy was 7.9 weeks[†]
- ◆ No patient in the randomized-withdrawal period had a reintroduction of CS therapy

[†]Medications used at baseline: NSAIDs (n=58), colchicine (n=69), or corticosteroids (n=41), alone or in combination.⁹
BL, Baseline; CI, Confidence Interval; CRP, C-reactive protein; NRS, Numerical Rating Scale; SE, Standard Error.

IMPORTANT SAFETY INFORMATION (continued)

Warnings and Precautions (continued)

- Increases in non-fasting lipid profile parameters occurred in patients treated with ARCALYST in clinical trials. Patients should be monitored for changes in their lipid profiles.

Please see Important Safety Information throughout and full Prescribing Information.

Arcalyst
(rilonacept) For Injection

In RHAPSODY,
ARCALYST provided sustained reduction in recurrence of flares while on treatment^{1,9}

RHAPSODY randomized-withdrawal period (primary endpoint)*

HR, Hazard Ratio.

*Primary efficacy endpoint was the time to first adjudicated recurrence.

- ◆ Recurrence-free rate was 93% (28 of 30) for ARCALYST and 26% for placebo (8 of 31) at the time that the event-driven, randomized-withdrawal period was closed
- ◆ All recurrences in patients treated with ARCALYST occurred during temporary treatment interruptions of 1-3 doses

In the randomized-withdrawal period, patients on ARCALYST reported 92% of trial days with minimal to no pericarditis pain compared to 40% of trial days for patients on placebo ($P<0.0001$)[†]

[†]Secondary endpoint assessed at Week 16 of the withdrawal period. Rated using the 11-point numeric rating scale (NRS) for average pericarditis pain intensity (0-10). A pain rating of NRS ≤ 2 indicates no pain to minimal pain.

“After starting ARCALYST, I didn’t experience any flares or recurrent pericarditis-related pain. I was able to be more present for my family.”

- Leslie, patient previously treated with ARCALYST

IMPORTANT SAFETY INFORMATION (continued)

Warnings and Precautions (continued)

- Since no data are available, avoid administration of live vaccines while patients are receiving ARCALYST. ARCALYST may interfere with the normal immune response to new antigens, so vaccines may not be effective in patients receiving ARCALYST. It is recommended that, prior to initiation of therapy with ARCALYST, patients receive all recommended vaccinations, as appropriate.

Please see Important Safety Information throughout and full Prescribing Information.

Arcalyst
(rilonacept) For Injection

In RHAPSODY, ARCALYST provided sustained prevention of pericarditis flares while on treatment¹⁰

RHAPSODY long-term extension after the 18-month decision milestone

- ◆ Recurrence-free rate was 97% (32 of 33) for ARCALYST and 25% (2 of 8) for those who suspended therapy
- ◆ The 1 recurrence in the ARCALYST group occurred during a treatment interruption of 4 weeks

“

I started taking ARCALYST in April of 2021. Since starting ARCALYST, I haven't experienced any flares.”

- Zenda, patient on ARCALYST*

*As of June 2026.

IMPORTANT SAFETY INFORMATION (continued)

Adverse Reactions

- The most common adverse reactions ($\geq 10\%$) include injection-site reactions and upper respiratory tract infections.

Please see Important Safety Information throughout and full Prescribing Information.

Arcalyst
(rilonacept) For Injection

In RHAPSODY,

The vast majority of patients remained free of recurrence on ARCALYST monotherapy for up to 3 years¹¹

ARCALYST as **monotherapy for long-term recurrent pericarditis management:**

Sustained disease control up to 3 years

(integrated post-hoc analysis from the randomized-withdrawal period and long-term extension)

- ◆ All recurrences in patients treated with ARCALYST occurred during temporary treatment interruptions of 1-3 doses¹⁰
- ◆ Data are from an integrated post-hoc analysis and should be interpreted within that context¹¹

IMPORTANT SAFETY INFORMATION

Drug Interactions

- In patients being treated with CYP450 substrates with narrow therapeutic indices, therapeutic monitoring of the effect or drug concentration should be performed, and the individual dose of the medicinal product may need to be adjusted.

Please see Important Safety Information throughout and [full Prescribing Information](#).

Arcalyst[®]
(rilonacept) For Injection

Proven safety profile in recurrent pericarditis^{1,9}

TEAEs occurring in the run-in and randomized-withdrawal periods of the RHAPSODY study in ≥5% of patients with recurrent pericarditis⁹

TEAE	ARCALYST or Placebo, n (%) (n=86)
Patients with any TEAE	74 (86.0)
Injection-site reactions*	29 (33.7)
Upper respiratory infections†	19 (22.1)
Arthralgia	10 (11.6)
Myalgia	10 (11.6)
Headache	7 (8.1)
Musculoskeletal chest pain	7 (8.1)
Cough	6 (7.0)
Back pain	5 (5.8)
Diarrhea	5 (5.8)
Fatigue	5 (5.8)

During the run-in and randomized-withdrawal periods (n=86):

- ◆ No AEs led to death
- ◆ Four AEs led to treatment discontinuation*
- ◆ Five SAEs occurred: One during the run-in period (stroke due to carotid artery dissection), one in the ARCALYST treatment arm (squamous cell carcinoma), one in the placebo arm (cardiac flutter), and two in the placebo arm following ARCALYST bailout (pyrexia and ileus)

AEs reported in RHAPSODY were generally consistent with adverse events in the Prescribing Information.¹

In the long-term extension (median duration: 22 months, maximum 35 months), adverse events were generally consistent with the Phase 3 pivotal trial.^{9,10}

ARCALYST demonstrated a generally consistent long-term safety profile^{1,9,10}

AE, Adverse Event; SAE, Serious Adverse Event; TEAE, Treatment-Emergent Adverse Event.

*Injection-site reactions include events occurring at the injection site; other events anatomically distant from the injection site may have been assessed as injection-site reactions.⁹

†Pooled terms, patients counted only once within a preferred term or system organ class.⁹

IMPORTANT SAFETY INFORMATION (continued)

INDICATION

ARCALYST is indicated for the treatment of recurrent pericarditis (RP) and reduction in risk of recurrence in adults and pediatric patients 12 years and older.

Please see Important Safety Information throughout and [full Prescribing Information](#).

In the 3 years after the approval of ARCALYST in recurrent pericarditis,
Following NSAIDs + colchicine, ARCALYST increasingly replaced corticosteroids¹²

Data from RESONANCE, the **largest real-world registry** from expert centers of patients with **recurrent pericarditis**

Use in patients with recurrent pericarditis failing aspirin/NSAIDs/colchicine

◆ Data drawn from 313 patients with recurrent pericarditis from 29 sites*

RESONANCE builds on the RHAPSODY evidence-base¹³

◆ Real-world data from RESONANCE affirmed the evidence-based shift to a glucocorticoid-sparing paradigm recommended by the 2025 ACC CCG and the need for prompt escalation to effective second-line therapies for recurrent pericarditis

Interval data analysis: March 1, 2020 to December 31, 2023.¹²

These data are retrospective and observational in nature and should be interpreted within that context. Predictive value is therefore limited. Results are possibly subject to bias due to site experience; generalizability to centers with different experience levels may be affected.¹⁴

*RESONANCE registry sites as of the July 1, 2024 data cutoff: Cleveland Clinic Foundation, OH; Mayo Clinic Rochester, MN; Allegheny Health Network, PA; Brigham & Women's Hospital, MA; Massachusetts General Hospital, MA; NYU Langone Health, NY; Virginia Commonwealth University, VA; TKL Research (decentralized site), NJ; Northwell Health/Lenox Hill Hospital, NY; Barnes Jewish/Washington University in St. Louis, MO; Houston Methodist, TX; University of California, San Diego, CA; Minneapolis Heart Institute Foundation, MN; Johns Hopkins, MD; Pima Heart and Vascular, AZ; Seattle Children's Hospital, WA; Scripps, CA; CedarsSinai, CA; Northwestern University, IL; University of Utah, UT; University of Vermont, VT; Alaska Heart and Vascular Institute, AK; Swedish Medical Center/Providence Health, WA; Wayne State/Detroit Medical Center, MI; Cleveland Clinic – Florida, FL; University of Texas Southwestern, TX; Cincinnati Children's Hospital, OH; Children's National Hospital, DC; Christ Hospital, OH.¹⁴

IMPORTANT SAFETY INFORMATION (continued)

Warnings and Precautions (continued)

- Interleukin-1 (IL-1) blockade may interfere with the immune response to infections. Treatment with another medication that works through inhibition of IL-1 or inhibition of tumor necrosis factor (TNF) is not recommended as this may increase the risk of serious infection. Serious, life-threatening infections have been reported in patients taking ARCALYST. Do not initiate treatment with ARCALYST in patients with an active or chronic infection.
- Discontinue ARCALYST if a patient develops a serious infection.

Please see Important Safety Information throughout and full Prescribing Information.

 (rilonacept) For Injection

ARCALYST offers broad coverage across all major payer types and low out-of-pocket cost*

**BROAD
COVERAGE**
across
**ALL MAJOR
PAYER TYPES[†]**

> 98%
PA approval

LOW
out-of-pocket
COST

\$0

*Eligible, commercially insured patients pay as little as **\$0 per month** for ARCALYST treatment with the copay assistance program[‡]

“The folks put me in touch with Kiniksa OneConnect. I work with [my dedicated PAL] who is just great to work with. She helped me navigate all of the insurance and financial aspects.”

- Warren, prescribed ARCALYST

Reimbursement Support

Insurance coverage and benefits

After verifying benefits with the insurer, the PAL will provide both you and your patient a summary of benefits, including the patient's copay responsibility.

PA support

We'll inform your office if a PA is required, including documentation required and how to submit.

Appeals support

If you receive notification that coverage has been denied, your PAL can provide a guide with a sample letter template for submitting a Letter of Appeal to the insurer.

Financial Assistance Programs

Commercial Copay Assistance Program[‡]

Eligible, commercially insured patients pay as little as \$0 per month for treatment.

Quick Start Program[§]

Supports eligible patients with delay in coverage for treatment initiation.

- ◆ Program offered at no cost for up to 60 days while awaiting PA

Patient Assistance Program^{||}

Supports eligible patients with limited or no coverage for treatment.

- ◆ Qualified patients can receive treatment at no cost for up to 12 months

Eligibility requirements, terms and conditions, and restrictions apply.

PA, Prior Authorization; PAL, Patient Access Lead.

[†]Commercial, Medicare, Medicaid, Tricare, and Department of Defense. Based on completed cases in 2025.

[‡]To be eligible for the Kiniksa Copay Assistance Program, your patient must have commercial insurance, must not have Medicare, Medicaid, or other government insurance, and must meet other eligibility criteria. Your patient also must agree to the rules set forth in the terms and conditions for the program.

[§]Program offered for up to 60 days. To be eligible for the Kiniksa Quick Start Program, your patient must meet certain financial eligibility requirements. Please visit kiniksapolicies.com/qstart to review additional eligibility criteria.

^{||}Program offered for up to 12 months. Please visit kiniksapolicies.com/pap to review additional eligibility criteria.

IMPORTANT SAFETY INFORMATION (continued)

Warnings and Precautions (continued)

- It is possible that taking drugs such as ARCALYST that block IL-1 may increase the risk of tuberculosis (TB) or other atypical or opportunistic infections.

Kiniksa OneConnect™:

Comprehensive support throughout the treatment journey

ARCALYST Enrollment Form

Download an ARCALYST Enrollment Form with this QR code or at ARCALYST.com/enrollment

ARCALYST® (ribocept) ENROLLMENT FORM
Instructions for Healthcare Providers (HCP)

1. Have your patient read the Patient Consent information form and sign the signature field.
Once your patient reads a copy of the Patient Consent information form, if the form is not signed at submission, a Patient Access Lead with the Kiniksa OneConnect™ program can subsequently acquire a signature electronically.

2. Complete this enrollment form and download a copy. Please be sure all of the items in this HCP Instructions checklist are completed on the enrollment form.

- ☐ Fill out all required fields; incomplete fields may delay the start of treatment
- ☐ Sign and date the enrollment form in PRESCRIPTION CERTIFICATION (Section 6)
- ☐ Fully complete the PRESCRIPTION (Section 5)
- ☐ Complete INSURANCE INFORMATION (Section 2) and provide copies of your patient's medical and prescription insurance cards
- ☐ Include a patient demographic sheet if available
- ☐ If required, please submit a completed Prior Authorization (PA) to the payer

3. Fax the enrollment form to 1-781-609-7826. Following enrollment:

- A Patient Access Lead with the Kiniksa OneConnect™ program will contact your patient to discuss the next steps to take to get their ARCALYST prescription filled.
- The specialty pharmacy will coordinate delivery of the prescription to the address provided in section 1 of the enrollment form.
- If you have any questions about the Kiniksa OneConnect™ program, please call 833-KINIKSA (833-546-4576), Option 1. To learn more about ARCALYST, visit ARCALYST.com/HCP

Recurrent Pericarditis and Related ICD-10 Codes:

- There is not a specific ICD-10 code for recurrent pericarditis; however, codes exist that can be used for recurrent pericarditis.
- Payers may require an ICD-10 code on a prior authorization form.
- Specialty pharmacies may also ask for a patient's ICD-10 code.
- On the right are some codes associated with recurrent pericarditis.
- The decision on assigning an ICD-10 code is up to a physician's discretion and knowledge of their patient's condition(s).
- This is not an all-inclusive list. Payers may require other ICD-10 codes for recurrent pericarditis not listed here.
- Use of the listed codes is not a guarantee of coverage or payment.

ICD-10 Code	Description
I00.0	Acute pericarditis, unspecified
I00.1	Acute pericarditis, unspecified
I00.2	Chronic pericarditis, unspecified
I00.9	Pericarditis, unspecified

Please see full Prescribing Information available at ARCALYST.com/HCP

Fax completed enrollment form (pages 2-4) to 1-781-609-7826.

Fax completed enrollment form (pages 2-4) to 1-781-609-7826.

PATIENT CONSENT INFORMATION
Please read the following, then complete and sign the areas indicated below.

I understand that the Kiniksa OneConnect™ program (the Program) is a patient support service offered by Kiniksa Pharmaceuticals ("Kiniksa") to help eligible patients who have been prescribed a Kiniksa therapy to obtain financial assistance and access other patient support programs and services provided by the Program.

By signing below, I authorize my healthcare providers and staff (my physicians, pharmacists) and my insurance company to disclose to Kiniksa or other third parties, personal health information about me, including information related to my medical condition and any treatment, my health insurance coverages, and my address, email address, and telephone number (collectively, my "PHI") to Kiniksa, to affiliates, agents, contractors, and representatives, and the Program so that Kiniksa may review, use, and disclose the PHI and information on this form for purposes of (i) verifying, investigating, evaluating, and coordinating my coverage for the therapy, (ii) providing education, information and financial support, (iii) coordinating delivery of the therapy to me or my healthcare provider, (iv) providing education, information and financial support, and support services related to the therapy, (v) gathering feedback on my therapy and/or disease state, (vi) contacting me by mail, email, phone, or text for any of the above purposes, and (vii) creating information that does not identify me personally for use other than for the legitimate purposes set forth in this authorization. I also authorize Kiniksa and my healthcare providers and my insurance company to use my PHI to communicate with me about Kiniksa products and services, including my pharmacy and Kiniksa contacts to receive information from Kiniksa for checking or using my PHI and/or for providing support services as outlined in this authorization. I understand that once disclosed pursuant to this authorization, my PHI may no longer be protected under federal or state law and could be disclosed by Kiniksa to others. But I also understand that Kiniksa will make reasonable efforts to keep my PHI private and to disclose it only for purposes set forth in this authorization.

I understand that I do not have to sign this authorization to obtain health care treatment or benefits; however, in order to receive the services and communications described above, I must sign this authorization. I understand that I may cancel my authorization at any time by contacting Kiniksa by fax at 1-781-609-7826, or by email at KiniksaOneConnect@kiniksa.com, 500 Revere Avenue, Lexington, MA 02421. My cancellation of this authorization will be effective for Kiniksa upon receipt, and will be effective for each of my healthcare providers and insurance companies when they are notified of it, but the cancellation will not affect prior use or disclosure of PHI.

I understand that I have a right to receive a copy of this authorization.

I understand that this authorization will remain valid for 5 years after the date I sign it or as shown below, unless I cancel it earlier as described above, or unless a shorter period is required under state or federal law.

If the form is not signed at submission, a Patient Access Lead with the Kiniksa OneConnect™ program can subsequently acquire a signature electronically.

***PATIENT CONSENT: If patient consent on this form during submission is not possible, consent can be acquired electronically.**

Please read, understand, and agree to get the PATIENT CONSENT INFORMATION and verify that the information herein provided in this authorization is complete and accurate.

*Kiniksa Name of Patient, Legal Guardian, or Personal Representative: _____

*Relationship to Patient: _____ Email: _____

*Signature of Patient, Legal Guardian, or Personal Representative: _____ Date: _____

***Required Information**

Please review the statements below. Checking these boxes is optional.

☐ By checking this box, I consent to receive recurring text messages from the Kiniksa OneConnect™ program, including service updates and medication reminders, to the number I have provided. Messages and data rates may apply. I am not required to provide my consent as a condition to receiving any goods or services. I can text STOP to unsubscribe any time. A chance at freedom from future flares for your patients with recurrent pericarditis

In recurrent pericarditis, treat a key driver of disease, not just the symptoms^{1,2}

- ◆ Traditional oral therapies, such as corticosteroids, do not target the underlying disease directly²
- ◆ ARCALYST targets IL-1-mediated autoinflammation, a key driver of recurrent pericarditis^{1,2}

The totality of clinical trials evidence, including data from RHAPSODY, has informed both published guidance and real-world practice of a steroid-sparing paradigm in recurrent pericarditis^{2,12}

Your choice matters:

After NSAIDs/colchicine, consider ARCALYST—the first and only FDA-approved treatment for recurrent pericarditis^{1,2}

"ARCALYST wasn't just a 'Band-Aid' for symptoms—I was excited to try a treatment shown to treat the disease and reduce the risk of recurrences."

- Leslie, patient previously treated with ARCALYST
